EI 77-052 & EI 78-018

SUPERSEDED BY EI 86-039 EFFECTIVE 12/1/86

The New York State Department of Transportation Standard Specification for Highway Bridges, dated April 1976, has been revised. The new edition, dated April 1979, consists of the 1977 AASHTO Standard Specifications for Highway Bridges, as modified by AASHTO interim specifications and by New York State.

The Department will provide only the New York State modifications, in the form of blue insert sheets, for distribution to consulting engineers. These sheets are intended to be combined with the current AASHTO Specifications. The resulting text shall be considered as the New York State Department of Transportation Standard Specifications for Highway Bridges, dated April 1979. Subsequent Interim Specifications issued by AASHTO will automatically become part of this specification unless specifically deleted or amended by the Department in the form of additional blue insert sheets.

The entire text of the new specification will be distributed to appropriate Department personnel and will be updated as AASHTO interim specifications are published.

Upon receipt of this material, the new edition of the specifications shall be considered in effect for all structural design projects, unless it is apparent that implementation of such will result in undue delay to projects currently under design.
